No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1982 articles are the same as those shown for current articles.

MADE IN THE UNITED STATES OF AMERICA

CONTENTS OF VOLUME 127

NUMBER 1, NOVEMBER 15, 1982

Isolation of Purified Mitochondrial DNA from *Brassicae*
Fernand Vedel and Chantal Mathieu 1

The Use of Single-Stranded Phage DNAs in Hybrid Arrest and Release Translation
Peter M. Chandler 9

The Use of High-Performance Liquid Chromatography for Quantitation of Plasma Amino Acids in Man
Daniel L. Hogan, Kevin L. Kraemer, and Jon I. Isenberg 17

High-Performance Liquid Chromatographic Separation of Lipoxygenase Isozymes in Crude Soybean Extracts *Candadai S. Ramadoss and Bernard Axelrod* 25

Direct Determination of UDP-Glucuronic Acid in Cell Extracts by High-Performance Liquid Chromatography *Tak Yee Aw and Dean P. Jones* 32

Quantification of Phospholipid Molecular Species by Coupled Gas Chromatography–Mass Spectrometry of Deuterated Samples
Benjamin F. Dickens, C. S. Ramesha, and Guy A. Thompson, Jr. 37

Analysis of Dansyl Amino Acids by Reverse-Phase High-Performance Liquid Chromatography *Norio Kaneda, Michihiko Sato, and Kunio Yagi* 49

A Manual Subtractive End-Group Determination of Oligopeptides Using Fluorescamine or *o*-Phthalaldehyde *E. Méndez* 55

Purification from Bee Venom of Melittin Devoid of Phospholipase A_2 Contamination
Yves Maulet, Urs Brodbeck, and Bernard W. Fulpius 61

Determination of Tissue UDP-Glucuronic Acid Levels by High-Pressure Liquid Chromatography *Carol M. Schiller, Cindy S. Dieringer, Margaret E. Twine, and A. Robert Jeffcoat* 68

Cellulose Acetate Electrophoresis of Protein Kinases: Detection of the Active Forms Using Various Substrates *Françoise Phan-Dinh-Tuy, Anne Weber, Joëlle Henry, Dominique Cottreau, and Axel Kahn* 73

Fluorescent Nucleotide Triphosphate Substrates for Snake Venom Phosphodiesterase
Stuart E. Pollack and David S. Auld 81

Synthesis of Chiral Acetic Acids by a Simple Enzymatic Procedure
Peter F. Leadlay and Shaun Greer 89

A Thermoelectrically Regulated Multipurpose Cuvette for Simultaneous Time-Dependent Measurements *Ruud Kraayenhof, Jaap J. Schuurmans, Leen J. Valkier, Jan P. C. Veen, Daan Van Marum, and Carel G. G. Jasper* 93

A Convenient Enzymic Synthesis of Guanosine Diphosphate-[^{14}C]mannose
Thomas J. Grier and James R. Rasmussen 100

A Sensitive Assay Employing a Solid-Phase Metal Chelator to Estimate Rates of Iron Accumulation by Ferritin
James F. Collawn, Jr., D. G. Priest, and Wayne W. Fish 105

Purification of Nuclei from a Flagellate Protozoan, *Trypanosoma brucei*
S. Z. Shapiro and S. J. Doxsey 112

The Estimation of DNA Contamination in RNA and Enzyme Preparations
Ian R. Radford and Roger F. Martin 116

Determination of Low Levels of ^{14}C Radioactivity in Cell Exudates by Means of Ultraviolet Photooxidation and a Rapid $^{14}CO_2$-Collection Technique
Harry W. Higgins 121

A Radioisotope Assay for L-Glutaminase: The Measurement of Tritiated Water Formation from the Reaction of L-[2-^{3}H]Glutamine with the L-Glutaminase and Glutamate Oxalacetate Transaminase Couple
Carol L. Zielke, H. Ronald Zielke, and Pinar T. Ozand 134
Iodination of Biological Samples without Loss of Functional Activity
Francisco Tejedor and J. P. G. Ballesta 143
An Improved Enzymatic Radioassay for Ribose 1-Phosphate
R. Scott McIvor, Robert M. Wohlhueter, and Peter G. W. Plagemann 150
Column Chromatography on Polyethylenimine-Silica: Rapid Resolution of Nucleotides and Proteins with Short Columns and Low Pressures
K. Watanabe, W.-S. Chow, and G. P. Royer 155
A Sensitive Method for Determining Quinolinic Acid in Animal Tissues
A. Sánchez-Pozo, J. A. Lupiáñez, A. Gil, and F. Sánchez-Medina 159
Determination of Nitrate Reductase with Laser-Induced Thermal-Lensing Colorimetry
Kitao Fujiwara, Kazumi Kishibe, Hisao Uchiki, Fumio Shimokoshi, Keiichiro Fuwa, and Takayoshi Kobayashi 164
The Preparation of UDP-*N*-Acetylgalactosamine from UDP-*N*-Acetylglucosamine Employing UDP-*N*-Acetylglucosamine-4-Epimerase
Friedrich Piller, Allen E. Eckhardt, and Robert L. Hill 171
A New Colorimetric Technique for the Estimation of Vitamin C Using Folin Phenol Reagent *S. K. Jagota and H. M. Dani* 178
A Receptor–Ligand Reaction Studied by a Novel Analytical Tool—The Isoscope Ellipsometer *Manne Stenberg and Håkan Nygren* 183
High-Performance Liquid Chromatography of Proteins: Purification of the Acidic Isozyme of Adenylosuccinate Synthetase from Rat Liver
Frederick B. Rudolph and Sandra W. Clark 193
Application of High-Performance Liquid Chromatographic Peptide Purification to Protein Microsequencing by Solid-Phase Edman Degradation
James J. L'Italien and James E. Strickler 198
Measurement of Endogenous Leucine Enkephalin in Canine Caudate Nuclei and Hypothalami with High-Performance Liquid Chromatography and Field-Desorption Mass Spectrometry *Shigeto Yamada and Dominic M. Desiderio* 213
Fluorescent Techniques for the Selective Detection of Chromatographically Separated Peptides *Timothy D. Schlabach and Timothy C. Wehr* 222

NUMBER 2, DECEMBER 1982

Enhanced Resolution in Two-Dimensional Electrophoresis of Low-Molecular-Weight Proteins while Utilizing Enlarged Gels *Ben F. Johnson* 235
A Quantitative Radioimmunological Screening Method for Specific Gene Products
Robert G. Kranz and Robert B. Gennis 247
High-Performance Liquid Chromatographic Purification of Peptide Hormones: Ovine Hypothalamic Amunine (Corticotropin Releasing Factor)
J. Rivier, C. Rivier, J. Spiess, and W. Vale 258
Isolation and Purification of *Escherichia coli* Heat-Stable Enterotoxin of Porcine Origin
R. Lallier, F. Bernard, M. Gendreau, C. Lazure, N. G. Seidah, M. Chrétien, and S. A. St-Pierre 267
Screening the Efficiency of Intracytoplasmic Delivery of Materials to HeLa Cells by Liposomes *D. H. Norrie, R. A. Pietrowski, and J. Stephen* 276

A Versatile Shear Cell for Diffusion Measurements on Small Sample Volumes Allowing Analytical Recording of Multicomponent Transport. I. Design of Instrument
Lars-Olof Sundelöf 282

A Versatile Shear Cell for Diffusion Measurements on Small Sample Volumes Allowing Analytical Recording of Multicomponent Transport. II. Applications
Torvard C. Laurent, Barry N. Preston, Lars-Olof Sundelöf, and Marie-Paule Van Damme 287

The Use of L-[^{35}S]Methionine and L-[^{75}Se]Selenomethionine for Double-Label Autoradiography of Complex Protein Patterns on Two-Dimensional Polyacrylamide Gels: A Drastic Shortening of the Exposure Time
Raymond E. Lecocq, Anne Hepburn, and Françoise Lamy 293

Metal Ion Artifact in Cold Trichloroacetic Acid Precipitation Assays
Norimitsu L. Sato and Takatsugu Yamada 300

Fluorometric Quantitation of Single-Stranded DNA: A Method Applicable to the Technique of Alkaline Elution *D. L. Stout and F. F. Becker* 302

Reappraisal of the Causes of the "Hook Effect" in Two-Site Immunoradiometric Assays
Richard G. Ryall, Colin J. Story, and David R. Turner 308

Ultrasensitive Silver-Stain Method for the Detection of Proteins in Polyacrylamide Gels and Immunoprecipitates on Agarose Gels
M. Porro, S. Viti, G. Antoni, and M. Saletti 316

Assay of Glutaminase Activity by Colorimetric Determination of Glutamate
F. Javier Gella and M. Angeles Pascual 322

Formaldehyde Fixation of Proteins and Small Polypeptides after Isoelectric Focusing in Polyacrylamide Gels *Thomas J. Trah and Mark Schleyer* 326

Improved Vertical Polyacrylamide Gel Electrophoresis Using Plastic Envelopes
S. T. Nerenberg, A. H. George, W. F. Steele, and J. Devine 330

Electrophoretic Extraction–Concentration of Ribonucleic Acid from Agarose–Acrylamide Composite Gels *Mohammad A. Rashid and Shuichi Hashizume* 334

A Flow-Through Tissue Culture System with Fast Dynamic Response
J. Lankelma, E. Laurensse, and H. M. Pinedo 340

Quantitative Determination of Myeloperoxidase Using Tetramethylbenzidine as Substrate *Patricia C. Andrews and Norman I. Krinsky* 346

Synthesis and Properties of the New Thiol-Specific Reagent Difluorescein Disulfide: Its Application on Histone–Histone and Histone–DNA Interactions
Edgar Wingender and Alejandro Arellano 351

Observation of Nanosecond Transient States in Laser-Induced Reactions of Pyridoxal 5′-Phosphate
L. S. Walters, T. J. Cornish, H. W. Askins, and J. W. Ledbetter 361

Quantitative Determination of the Protein Content of Citrus Leaf Extracts: A Comparative Study *J. Antonio Agustí and J. Pío Beltrán* 368

Use of *S*-Adenosylmethionine as an Index of Methionine Recycling in Rat Liver Slices
Anthony J. Barak, Harriet C. Beckenhauer, and Dean J. Tuma 372

Purification of Carnitine Acetyltransferase from *Candida tropicalis*
Reiner Claus, Othmar Käppeli, and Armin Fiechter 376

Bioluminescent Assays of Picomole Levels of Various Metabolites Using Immobilized Enzymes *G. Wienhausen and M. DeLuca* 380

Glycoprotein Detection in Nitrocellulose Transfers of Electrophoretically Separated Protein Mixtures Using Concanavalin A and Peroxidase: Application to Arenavirus and Flavivirus Proteins *J. C. S. Clegg* 389

Micromeasurement of Nucleoside 5′-Triphosphates Using Coupled Bioluminescence
Gary A. Goodrich and Harry R. Burrell 395
Serratia marcescens Chitinase: One-Step Purification and Use for the Determination of Chitin *Rowena L. Roberts and Enrico Cabib* 402
Dual-Beam Difference Spectroelectrochemistry *C. William Anderson, Michael R. Cushman, S. Mark Kennedy, and Julia R. Wheeler* 413
Rapid Assay for *in Vitro* Degradation of Luteinizing Hormone Releasing Hormone
H. Berger, H. Schäfer, E. Klauschenz, E. Albrecht, and B. Mehlis 418
New Methods for Synthesis of the Colored Edman Degradation Reagent, 4-*N*,*N*-Dimethylaminoazobenzene-4′-Isothiocyanate
Wangyi Liu, Minfang Ding, and Meiching Hsu 426
Rapid Purification of Bacterial Plasmids and Coliphage M13 RF without CsCl Centrifugation *D. S. Holmes* 428
A Note on the Use of CsCl Centrifugation to Purify Bacterial Plasmids Prepared by the Rapid Boiling Method *A. J. Eisenberg and David S. Holmes* 434
A Picomolar Spectrophotometric Assay for Superoxide Dismutase
Thomas W. Kirby and Irwin Fridovich 435
Separation and Detection of Neutral Lipids and Free Fatty Acids in a Liver Extract by High-Performance Liquid Chromatography
Michael D. Greenspan and Elizabeth A. Schroeder 441
Isolation of Skeletal Muscle Collagen *Katsuyuki Fujii and Kagehisa Murota* 449
A New Method for Partial Peptide Mapping Using *N*-Chlorosuccinimide/Urea and Peptide Silver Staining in Sodium Dodecyl Sulfate–Polyacrylamide Gels
Michael A. Lischwe and Denise Ochs 453

INFORMATION FOR AUTHORS[1]

Analytical Biochemistry is an international journal that will publish original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell and tissue culture techniques that are of general application.

— Sequencing and synthesis of nucleic acids; chemical mutagenesis.

— Purification methods for enzymes and other proteins when a high level of purity has been achieved.

— Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that have a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to ***Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101.** In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal now requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? **Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers.** These words will also be used in the preparation of the annual cumulative subject index for the journal. Please number all pages of the manuscript.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the July 15, 1981 issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

---

[1] An extended Information for Authors was published in the July 15, 1982 issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is 8½ × 11 inches (21 × 27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **125,** 255–260.
2. Metzler, D. E. (1977) Biochemistry: The Chemical Reaction of Living Cells, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) *in* The Proteins (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246–409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
